

# WAUGH & ALLEN, ASSOCIATES IN ORTHODONTICS

Dr. Robert L. Waugh

## Specializing in Orthodontics

**A**ccomplished orthodontist and father of four, Dr. Robert L. Waugh understands the importance of providing the absolute best in orthodontic care for children and adults. In fact, he and his associates at Waugh & Allen Orthodontics are leading the way in creating healthier smiles with a revolutionary technology which provides more comfortable treatment in record time.

The Damon System™ of braces, a new innovation in orthodontics, produces better results in less time through a unique design that allows these braces to slide more easily along wires than traditional braces. Five hundred times less friction means orthodontists can use extremely light forces to comfortably and efficiently accomplish their treatment goals.

"The results we've seen with our Damon patients have been incredible," said Dr. Waugh. "Overall treatments are generally completed now in one-third less time and numbers of total adjustment visits have been equally reduced. All of this has been occurring while patient comfort and satisfaction have gone through the roof!"

In addition to his work with the Damon System, he serves as an Assistant Professor of Orthodontics at MCG. His interest in teaching the Damon technique has expanded into the creation of the Damon Institute for Advanced Orthodontic Education, a teaching center for orthodontists.

Dr. Waugh graduated from MCG in 1987 with both a DMD and a Masters Degree in Oral Biology. He went on to earn his orthodontic certification and a second Masters Degree at Baylor University in 1989. In 2000, Dr. Waugh became the first and only board certified orthodontist in Athens. He has served as President of the Georgia Association of Orthodontists and the Clarke County Dental Society and has been inducted into the American College of Dentists and the International College of Dentists.

Waugh & Allen, Associates in Orthodontics offers complimentary initial examinations for new patients and if early treatment is not needed, those patients are enrolled in the Orthodawg Club, a recall program to keep kids excited about braces.
